

Aryan Mahendra Mokashi

📍 Thane, Maharashtra-400605 | 📞 +91-9167591777 | ✉ aryanmokashi28@gmail.com | 🔗 [LinkedIn](#) | 🐙 [GitHub](#) | 📁 [Portfolio](#)

Summary

Postgraduate student in Data Science & Artificial Intelligence with hands-on experience in machine learning, data analysis, and full-stack system development. Skilled in exploratory data analysis, statistical modelling, dashboarding, and AI-powered application design. Experienced in building scalable backend systems and translating business problems into data-driven solutions using Python, ML frameworks, and cloud technologies.

Education

M.Sc. Data Science & Artificial Intelligence SVKM Mithibai College CGPA: 8.65	July 2024 – April 2026 Vile-Parle, Mumbai
B.Sc. Computer Science JVM Mehta College CGPA: 8.95	July 2021 – April 2024 Airoli, Navi Mumbai

Technical Skills

Languages: Python, R, JavaScript, TypeScript	Databases: MySQL, MongoDB, Supabase
AI & Automation: OpenAI GPT, Gemini AI, Prompt Engineering	Frontend: React.js, HTML, CSS, Next.js
Data Analysis & Visualisation: Excel (Advanced), Power BI	Backend: Flask, FastAPI
Testing & Tools: Render, Railway, Git, Vercel, Netlify	Cloud: AWS, Google Cloud

Experience

Sales Analyst Intern – Tyrod Clothing Private Limited Goregaon (East), Mumbai, Maharashtra	Feb 2026 – June 2026
--	-----------------------------

- Conducted exploratory data analysis (EDA) on sales datasets to identify revenue trends, seasonality patterns, and high-performing SKUs.
- Developed KPI dashboards using Excel/Power BI to track sales growth, inventory turnover, and category-wise performance metrics.
- Applied statistical trend and variance analysis on historical data to support demand forecasting and improve inventory planning efficiency.

Freelance Full Stack Developer

IT'Z ME Official (Fashion Retail)	Oct 2025 – Jan 2026
--	----------------------------

Tech Stack: React.js, Flask, MongoDB, AWS EC2, Cloudinary, Razorpay

- Architected and deployed a scalable full-stack e-commerce platform using React, Flask, and AWS EC2 with optimized media delivery via Cloudinary CDN.
- Designed a MongoDB-based inventory management system with atomic updates for size-variant stock tracking, preventing overselling during peak traffic.
- Integrated Razorpay payment gateway with secure HMAC SHA256 server-side verification and built a smart checkout system, reducing shipping errors by ~40%.

D Waffle Story (QR-Based Digital Menu)	May 2026 – June 2026
---	-----------------------------

Ulwe, Navi Mumbai

Tech Stack: React.js, FastAPI, MongoDB Atlas, Cloudinary, JWT

- Architected and built a QR-based digital menu platform replacing static printed menus for a local food business, with an admin panel enabling the owner to update dishes, pricing, and availability in real time without developer involvement.
- Migrated admin authentication from token-based to HttpOnly cookie sessions with CSRF double-submit protection across a cross-origin frontend/backend deployment, resolving SameSite/Secure cookie constraints and a production-breaking motor-pymongo dependency conflict in the process.
- Designed a multi-tenant-ready MongoDB schema and analytics pipeline tracking dish views and peak traffic hours, giving the owner first-time visibility into customer behaviour and demand patterns.

Projects

Hinglish Offensive Language Detection using Transformer Models (Published Research)	May 2025 – Jan 2026
--	----------------------------

View Paper: <https://rjwave.org/jafr/papers/JAAFR26A3208.pdf>

Tech Stack: Python, Transformers, NLP, Hugging Face, Antigravity

- Compared **mBERT** and **MuRIL** using multiple preprocessing strategies.
- Built an automated pipeline for training and evaluation with **macro F1 scoring**.
- Found **MuRIL outperforms mBERT by ~1.4%**, showing importance of domain-specific models.
- Identified challenges like **slang ambiguity, transliteration errors, and mixed-language complexity**

Automated Attendance Monitoring System – Smart India Hackathon (Team Leader)	Aug 2025 – Oct 2025
---	----------------------------

Tech Stack: React Native, Flask, MongoDB Atlas, JWT, Python

Demo Video: <https://www.youtube.com/watch?v=d-BjvncCt8o>

- Developed a secure attendance system using **QR, face recognition, geo-location, and device authentication**.
- Implemented a robust backend using Flask and **JWT-based identity validation**.

- Delivered the full prototype and qualified through the college-level SIH selection round.

NutriChef – AI Cooking Chatbot & SaaS Meal Planner

Feb 2025 – Mar 2025

Tech Stack: Flask, Python, PostgreSQL, React.js, Gemini API, Razorpay API, Swagger UI, Flask-Mail

- **Engineered a full-stack AI nutrition platform** utilising the Gemini API to power a 7-day multi-turn meal planner, smart ingredient substitutions, client-side BMI/TDEE calculation engines, and automated allergy filtering.
- **Integrated a secure Flask + PostgreSQL backend** with a React.js frontend, executing a critical migration from SQLite to eliminate database write-locking and support high-concurrency multi-user traffic.
- **Implemented production-grade SaaS infrastructure** by integrating the Razorpay Subscriptions API for webhook-driven recurring billing, token-based authentication security (Flask-Mail), and a Swagger/OpenAPI-documented REST API.

Certifications & Activities

- Basic to Advanced SQL, Power BI, Excel, PowerPoint – Skill Nation
- Generative AI Mastermind (Workshop) – Outskill – [Certificate](#)
- AI Dashboards using Microsoft Power BI (Workshop) – Skill Nation – [Certificate](#)
- Complete React and NextJS course with AI-powered Projects – Udemy – [Certificate](#)

June 2026
